

Release Information for DigitizerPro V1.0

The release of DigitizerPro V1.0 brings many improvements and new features to its predecessor, Janome Digitizer 10000. There are many general improvements to the interface. DigitizerPro also brings many lettering improvements with a dedicated toolbar. Automatic digitizing has been enhanced and there is an all-new Photo Click feature. DigitizerPro also brings improvements to thread color control and hooping.

The new Fabric feature now gives you total control over fabric settings as well as automatic underlay and pull compensation. There are also more advanced digitizing features to help you create exciting new embroidery effects. And graphics file handling has been enhanced, allowing you to turn a wide range of electronic artwork, including photographs, into embroidery. DigitizerPro can also now export a number of professional embroidery file formats for use with commercial machines.

DigitizerPro V1.0 Features:

- * Compatible with all major machine formats and all Janome embroidery models
- * New 'flyout' tools minimize crowding and improve selection and access.
- * New navigation tools improve maneuverability around designs within the design window.
- * Improved Resequence dialog stays on the design window and is synchronized with the design window to dynamically update whenever objects are selected or manipulated.
- * New Align tools give expanded ways to automatically align objects.
- * New object cloning allows quick duplication of selected objects.
- * Easy switch between EasyDesign and EasyEdit allows switching between modes with a single click on the toolbar.
- * New Lettering toolbar provides all the controls needed to manipulate lettering in a single toolbar.
- * New TrueType font conversion allows any TrueType font installed on the user's computer to be converted to an embroidery alphabet.
- * Improved Click-to-Design allows more flexible automatic embroidery conversion.
- * New Photo Click creates embroidery from photographs or other images.
- * New Thread Colors dialog allows the user to add and customize colors.
- * New Fill Holes function fills in holes in selected objects.
- * New Gradient Fill varies stitch spacing between dense and open fill.
- * New Stretchiness allowance allows the user to compensate for the pull of stretchy fabric.
- * New EPS file support allows EPS files to be opened as bitmap images.
