4. Darning Foot (Open-toe) (PD-H)

The darning foot is very useful for free-motion quilting which is becoming more and more popular all round the world. The foot moves up and down in conjunction with the needle bar reducing skipped stitches and maintaining thread tightness. Different to the standard darning foot, the front of this foot has been removed to make it more convenient and easy to use.

Point 1 The front of the foot is open for better visibility

Since the front of the foot is open, the needle area is clearly visible. Because the up and down movement of the foot matches the needle bar, the foot holds the fabric allowing for a nice finish and great sewing results.

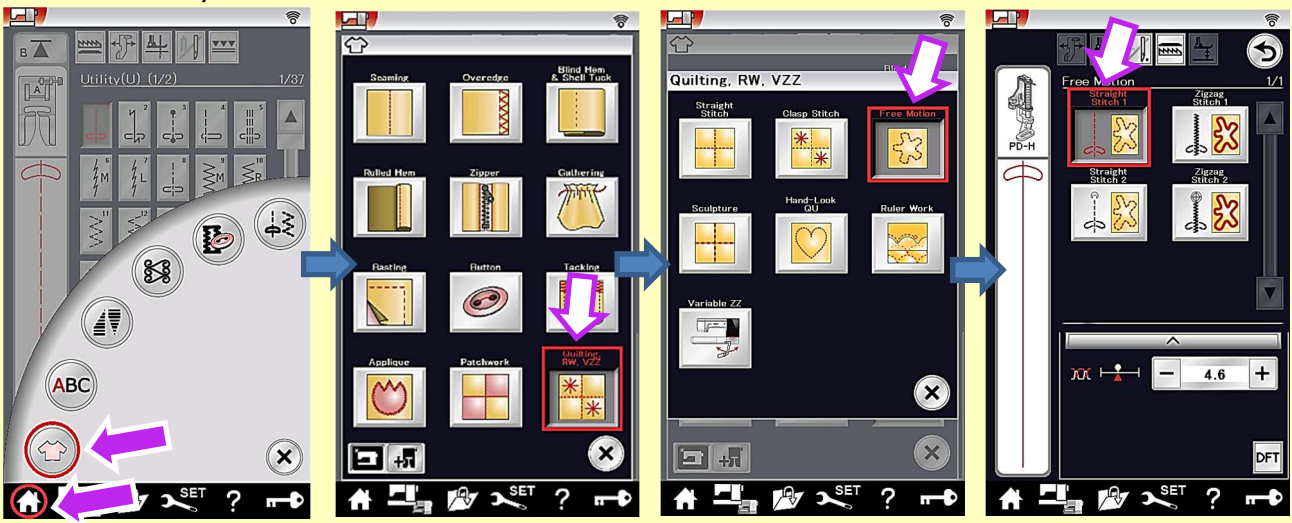

Even those who are new to free-motion quilting will find this foot easy to use.

*Recommended speed: slow to medium

Point 2 The free-motion page in Sewing Applications has many useful settings

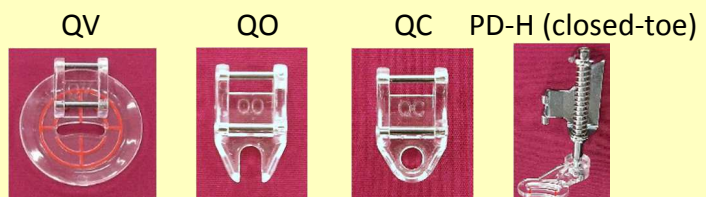

When the free-motion page is opened, the most suitable settings for free motion will automatically be selected.

*Better sewing results can be achieved by using the straight stitch needle plate.

Janome has many useful feet for free motion quilting. You can choose depending on what you want to create or your personal preferences.
