6. Elastic gathering foot & Attachments Part No. 200805401

Gathers elastic
for you

* Turning attachments up side down makes it possible to attach gathered elastic with cover hem stitch. This technique can be used for making gathered skirt, etc.

7. Cloth guide & Attachment holder Part No. 200812205

Guides curved fabric
to straight edges

The Cloth guide is very convenient for serging curved and straight fabrics together. This technique is commonly seen in home décor items like table cloths and bedspreads. The guide, which is separated into two parts, prevents fabrics from sticking together by static cling for smooth and comfortable serging.

Tips:

- Use your right hand to hold straight fabric in place and left hand to rotate curved fabric along the guide.
- Sew a few stitches on the straight fabric first. Then, insert curved fabric into upper portion of the guide up to just in front of the needles.
