

JANOME BULLETIN

Buttonhole stabilizer plate

With the buttonhole foot R attached to the buttonhole stabilizer plate, the machine feeds various kinds of fabric and uneven layers more smoothly instead of eating the fabric or causing the needle to stick in position. Complete your project creating neat buttonholes.

Parts No. 200-428-004
(Blister package)

Point 1 Available for any machine with a buttonhole foot R

This buttonhole stabilizer plate is compatible with all JANOME sewing machines that come with an automatic buttonhole foot R. The automatic buttonhole foot R must have a hollow underside. This modification was made in 2000 and has been applied to the buttonhole foot which has been manufactured since then.

* Customers with the automatic buttonhole foot with flat underside need the current modified version to use with the buttonhole stabilizer plate.

Point 2 Smoother feeding for various materials and edges

This new buttonhole stabilizer plate is extremely useful especially when making buttonholes in jeans, wool, fleece, stretch fabrics or edges with uneven thickness. Fabric is sandwiched between the plate holder (with attached buttonhole foot) on top and the metal plate underneath to support and hold the fabric for smoother feeding.

Point 3 Tips for a neat finish

Pull the upper and bobbin threads out between the foot and the plate before sewing.

Use the markings on the plate holder to align the edge of the fabric to make buttonholes easily and tidily.
